Summary

I've been working efficiently in telecom companies in various positions. For a few years I was managing successfully teams but at some point I realized that I enjoy more building software rather than managing people. So I decided to change my career.

In 2019-2020 I was studying at Yandex School of Data Analysis . After successful passing of the graduation project I started working as a programmer. My self-organization skills and perseverance to goals have helped me become a part of the professional IT-team.

Professional skills

Programming Languages	Frameworks/Libraries	Tools	Testing
JavaScript, TypeScript, HTML5, CSS/SCSS	React, React Hooks, Redux, i18n, Express.js	Git, Webpack, Nginx, Postman, Figma	Jest, Cypress

Work experience

Plan B Media (St.-Petersburg, Russia)
Web developer
Full-time & remote
12/2020 - 08/2022

Designed front-end for SPA (investor's tool):
- developed sets of reusable React-components,
- configured nested routing (react-router-dom),
- implemented Redux and improved state management.

Was on the MPA development team (social network):
- initiated and realized migration from Javascript to Typescript, reduced development and debugging time.
- configured Webpack with hbs templates, TS, react, SCSS (webpack plugins),
- migrated the project from Webpack4 to Webpack5, optimized production bundle,
- implemented localization with custom configuration (react-i18next, i18next),
- built the editor for posts with media content (React, Draft.js).

Also:
- made responsive layouts (CSS/SCSS, BEM, Flexbox),
- implemented asynchronous processes using backend API (fetch, promises),
- developed forms with validation (React, RegExp),
- developed HBS templates (Handlebars),
- used GitLab for control workflow.
